

mikroqid®
universal wipes
green line

We make surface
disinfection green.

Effective protection against viruses, bacteria and fungi. For the future of our planet

As with infection prevention, every minute and every action counts when it comes to protecting our ecosystems. **mikroqid® universal wipes green line** protect the health of employees, patients and relatives in the usual, reliable manner. Within seconds, they remove bacteria, fungi and viruses safely and gently from all patient-near surfaces – even from displays, mobile phones and keyboards. However, the novelty is: The wipes are 100% plastic-

free and climate-neutral. The wipes are manufactured using materials from FSC-certified forestry only. The majority of product components are manufactured in Germany, which ensures short transport routes. Combined with the use of green electricity in manufacture, this results in **mikroqid® universal wipes green line** having a 25% smaller CO₂ footprint than PET-based disinfectant wipes.

The remaining CO₂ emissions are compensated for by global climate protection projects.¹ In addition, optimisation of packaging produces 14% less waste and enables 27% higher pallet utilisation.²

With **mikroqid® universal wipes green line**, infection protection and sustainability go hand in hand from now on. Make your surface disinfection green too.

WITH THE USUAL EFFICACY AND
MATERIAL COMPATIBILITY

WIPE MATERIAL MADE FROM RENEWABLE
RAW MATERIALS – 100% PLASTIC-FREE

WIPE MATERIAL FROM SUSTAINABLE
FOREST MANAGEMENT

mikroqid® universal wipes green line are schülke's first disinfectant wipes for the clinical setting made entirely from renewable raw materials – with the usual,

outstanding cleaning performance and material compatibility even for mobile phones, displays and keyboards.
