

Nitrile examination glove featuring an advanced material for excellent user comfort and sense of touch

## Sempercure<sup>®</sup> Nitrile Skin<sup>2</sup> Gloves

### Our Plus

- suitable for latex type I allergy sufferers
- protection from infection for users and patients
- optimised wall thickness for excellent sense of touch
- innovative, soft material for high wearing comfort

### Product Profile

In addition to protection, wearing comfort and skin-friendliness, a good sense of touch is the most important criterion when choosing the right examination glove. The Sempercure Nitrile skin<sup>2</sup> combines these properties in a unique, exceptionally light glove.

The soft material developed by the Sempermed European Research Centre allows for maximum sense of touch and comfort due to optimised wall thickness, and at the same time maximum protection from infections. Structured finger tips guarantee a sure grip even in a moist environment, and the latex free material provides a safe alternative for latex type I allergy sufferers. The lavender blue colour makes it easy to distinguish from natural latex gloves and allows for easy recognition.
